Statement of Academic Integrity
Mathematics Department
St. Andrew’s School, Middletown, DE

The policies set forward in this statement of Academic Integrity are applicable to all St. Andrew’s School students enrolled in a mathematics class.

All academic work in mathematics completed by St. Andrew’s School students should be completed according to the statements below. This work includes homework assignments, in-class tests, take-home tests, collaborative projects and collaborative assignments.

1) All work submitted for a grade should be the product of the student’s own ideas. If the ideas of others are submitted as part of an assignment, full credit must be given to those persons.

2) Tools employed in mathematics such as calculators, computers, the Internet, etc. can be used only in accordance with the rules and directions set forth by your teacher.

3) Work submitted following collaborative efforts, either working with a group of students or consulting your teacher or other resources (textbook, Internet, etc) should only be submitted if the student understands fully the work being submitted. The student should never hand in work that he/she does not fully comprehend. Students submitting work should be able to explain fully the work they are submitting. Direct copying of homework is prohibited.

4) Whenever a student is in doubt regarding what constitutes allowable resources for completion of a specific assignment, that student should consult with his/her teacher.

In conclusion, please remember that your personal honor and integrity is far more valuable than academic achievement. The value placed upon these personal qualities is a major reason why studying and learning at St. Andrew’s School is such a special endeavor.
